 Use before \begin{document}. Usage: \usepackage{package}

Title

\author{text} Author of document.
 \title{text} Title of document.
 \date{text} Date.
 These commands go before \begin{document}. The declaration \maketitle goes at the top of the document.

Miscellaneous

\pagestyle{empty} Empty header, footer and no page numbers.
 \tableofcontents Add a table of contents here.

Document structure

\part{title} \subsubsection{title}
 \chapter{title} \paragraph{title}
 \section{title} \subparagraph{title}
 \subsection{title}
 Use \setcounter{secnumdepth}{*x*} suppresses heading numbers of depth > *x*, where chapter has depth 0. Use a *, as in \section*{title}, to not number a particular item—these items will also not appear in the table of contents.

Text environments

\begin{comment} Comment (not printed). Requires verbatim package.
 \begin{quote} Indented quotation block.
 \begin{quotation} Like quote with indented paragraphs.
 \begin{verse} Quotation block for verse.

Lists

\begin{enumerate} Numbered list.
 \begin{itemize} Bulleted list.
 \begin{description} Description list.
 \item text Add an item.
 \item[*x*] text Use *x* instead of normal bullet or number. Required for descriptions.

References

\label{marker} Set a marker for cross-reference, often of the form \label{sec:item}.
 \ref{marker} Give section/body number of marker.
 \pageref{marker} Give page number of marker.
 \footnote{text} Print footnote at bottom of page.

Floating bodies

\begin{table}[place] Add numbered table.
 \begin{figure}[place] Add numbered figure.
 \begin{equation}[place] Add numbered equation.
 \caption{text} Caption for the body.
 The *place* is a list valid placements for the body. t=top, h=here, b=bottom, p=separate page, !=place even if ugly. Captions and label markers should be within the environment.

The \LaTeX document should have the following two lines just before `\end{document}`, where `bibfile.bib` is the name of the \LaTeX file.

```
\bibliographystyle{plain}
\bibliography{bibfile}
```

\LaTeX example

The \LaTeX database goes in a file called `file.bib`, which is processed with `bibtex` file.
